Knivsta, Sverige

I am a Senior Software Engineer with a good sense for pragmatic solutions. I have single-handedly built and maintained Netwic.com for many years, a popular workforce management system used by large organisations such as IKEA and SJ. I can handle every aspect of an important system including requirements, programming, operations, security, release management, testing and DBA. But the most useful skill nowadays is... I know my AI.

Skills

AI

Grails & Groovy & Java

Computer Science
Uppsala University 1992–1996

Experience

Software Architect **Claes Svensson IT AB**
jan 2015–now Knivsta
Continued development and full-time responsibility for Netwic.com. Restructured my company to Claes Svensson IT AB.

Software Architect **Devenox**
sep 2010–dec 2014 Knivsta
Developing and maintaining Netwic.com, a much appreciated workforce management system used by large organisations. I rebuilt the site from scratch in 2010 using Groovy and Grails on the Java platform with MySQL as DB.

Software Engineer **Upsys AB**
sep 2004–sep 2010 Uppsala
Some of my larger projects included a GUI for analyzing emissions used at Fortum, and an automation and guidance tool used by field engineers at Apoteket when all stores were to be upgraded with new hardware and software. I also became a certified MySQL DBA and helped customers to tune and secure their MySQL installations in partnership with MySQL AB.

Software Architect **Devenox**
jun 2002–sep 2004 Knivsta
During massive company layoffs, I decided to leave SmartTrust on a voluntary basis. Developed two web shops, one that can be considered successful. I also developed software support for a secure smart card reader used by the Swedish Army.

Software Architect **iD2 & SmartTrust**
jun 2000–jun 2002 Stockholm
Consulting was replaced with product development. Working as a Product Architect meant more responsibility, including involvement in the earlier project phases and product line quality enhancements.

Software Engineer **Nexus Technology**
1997-2000 Uppsala
Software security development based on cryptography and smart cards. At Nexus I worked more with external customers. I also migrated from programmer to take on project and design responsibilities.

Software Engineer **TeliaSonera**
1996-1997 Uppsala
My first real job. I worked mainly as an in-house consultant at Telia Promotor in Uppsala. The Secure Internet Client had some market success, though short-lived due to early days in cryptography.
